

THERMOIL™

BATTERY TECHNOLOGY

**Built stronger,
lasts longer
than conventional batteries.**

- All ThermOil batteries are heavy-duty constructed ... more tolerant to physical shock and application vibrations.
- Available in all traditional vehicle usage sizes.
- ThermOil battery shelf life is more than three times longer and holds its charge in storage longer than conventional batteries.
- Superior performance in hot or cool weather conditions.
- Special proprietary oil virtually eliminates explosion risk and longevity-threatening battery evaporation.
- ThermOil batteries have up to 40% longer life over gel-cell and water-cell batteries.
- Less corrosion because ThermOil batteries produce 98% fewer toxic gases when compared to conventional wet-cell batteries.
- Recharges 25% faster than conventional batteries.
- Less maintenance required ... water consumption/loss is minimal.
